

The Facts About Fatigue

by NEWLIFEOUTLOOK TEAM

Understanding the Fatigue MS Brings

There are a few types of fatigue associated with MS. If your MS symptoms are disrupting your sleep at night, or if your daily activities require a lot of effort due to your reduced mobility, you may be fatigued because of these things.

However, there is also another kind of fatigue that affects MS patients, which is not related to the amount of sleep you get or your level of activity or stress.

Not all treatments for regular fatigue will work for this type of fatigue, which can strike even after a good night's sleep. But there are steps you can take to mitigate it, including keeping cool, resting regularly and dealing with stress.

Read our MS fatigue infographic below for more tips on coping with fatigue.

Laziness
Just Being Tired
Fake or Imagined

Fatigue Can Affect:

• Your mood	• Cognitive performance
• Physical function	• School work
• Work performance	• Community activities
• Social interaction	• Sense of self
• Family care	• Your appetite

Measuring Fatigue

The **Fatigue Severity Scale (FSS)** is a self-reported questionnaire used to measure your fatigue. It consists of ...

NINE Questions, each rated on a scale of 1-7

To score the Fatigue Severity Scale either add all items together (this will range from 9-63) or find the mean by adding your items together and dividing by 9 (this will range from 1-9).

In either case, the **higher the number** you calculate is, the **more fatigued** you are.

Tips for Reducing Fatigue

- Quantity & Quality of Sleep**
 - ✓ Have a regular bed time and wake up time
 - ✓ Use your bed just for sleeping
 - ✓ Do quiet activities if you're not sleepy
 - ✓ Room should be dark and quiet
- Proper Nutrition**
